THE FAMOUS FRANK PEACH

THE FRANK PEACH

(Photographed in Colors)

See Page 7 for full description and
prices on trees.

This Peach Has Made Our Nursery Famous

THIS CATALOGUE contains a list of the
finest plants for Texas and the great South-
west. It contains the cream of horticultural
productions featuring the famous:

STUBENRAUCH PEACHES
RISIEN PECANS
MUNSON GRAPES

Let's Get Acquainted

Production Mgr.

GREETINGS

Thanks to our many friends and customers. Our business doubled last year over the previous year. We appreciate your business and good will. Our aim is to make it pay each customer to buy from us. Every effort is made to have trees true to label, free from disease and handled and packed so as to reach the customer in first class condition. Will you please write me how you are pleased with our service.

We Have No Salesmen

You can save the agent's commission of 30 per cent to 50 per cent by buying from this catalogue.

FREE TREES

Each year we give away hundreds of free trees to our customers. This catalogue tells how to get them.

NEW VARIETIES WANTED

I keep an experimental orchard where I test promising new varieties. If you have an extra fine seedling peach, plum or any other fruit that you think is better than the variety already introduced please write me. Thanks for the many new varieties sent me in the past.

OUR LOCATION

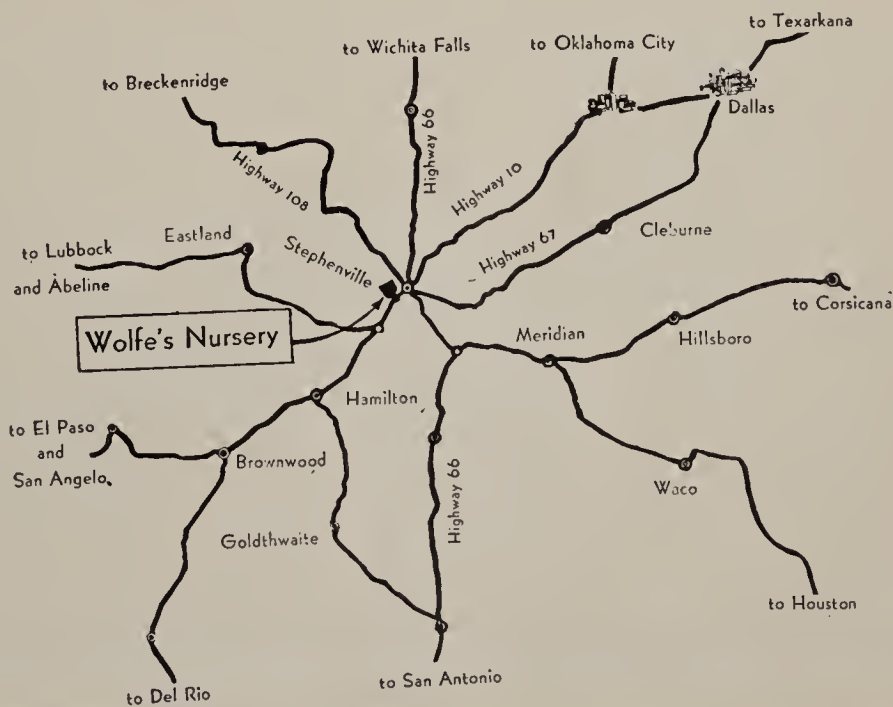

Stephenville is 69 miles Southwest of Fort Worth. Our nursery is two miles West of Stephenville on Highway 10. A wheel of good highways radiate from Stephenville.

It will pay you to visit our orchards and nursery. The number of visitors is increasing each year.

Let me again thank you for your business and good will.

Sincerely,

ROSS R. WOLFE, Owner,
Wolfe's Nursery.

PLEASE OBSERVE WHEN ORDERING

USE THE ORDER SHEET. It will save your time and ours and reduce the possibility of making mistakes. The inside of envelope is a blank order.

TERMS, CASH. Send Post Office or Express Money Order, Bank Draft, Check or Stamps. We will ship C.O.D. where one-fourth of the amount accompanies the order.

MAIL ORDERS. No mail orders filled for less than \$1.00.

FREE TRANSPORTATION. I will pay the postage, express or freight on all orders to Texas or states adjoining Texas except C.O.D. On C.O.D.'s the customer pays transportation.

SHIPPING SEASON. The shipping season for trees is from November 10th to March 20th. Cold storage bud and graft wood from March 1st to July 1st. Fresh buds of fruit from May 20th and fresh buds of pecans, walnut and persimmons from July 1st to September 25th.

SUBSTITUTION. Please state when ordering whether we can substitute a similar variety when we are out of the kinds named. We never substitute on commercial planting without consulting the customer.

INSPECTION. A certificate of inspection from the Texas Department of Agriculture, showing that the stock has been inspected and found free from injurious insect pests and diseases will accompany each shipment.

GUARANTEE. We guarantee every plant we sell to be true to name and to be satisfactory on delivery. We will replace any plant that proves untrue to name free of charge and we will replace for one-half price all plants that die the first year after planting, provided they have been well cared for.

Cheaper Prices At the Nursery

I want you to come to the nursery for your trees if possible. I want to meet you and I want you to see what you are getting. **OPEN FOR VISITORS EVERY DAY IN THE WEEK AND SUNDAYS AFTER 2 P. M.**

The Frost Resistant "Elf"

All fruits having this "Elf" emblem by their descriptions are frost resistant in the territory for which they are recommended. XXX means hardy; XX means reasonably hardy, and X means easily killed.

FREE TREES

Free trees and stock sent with every order for \$5.00 or more. I will select something suitable for your section.

This is a picture of our office with packing shed in the background and the following customers who came in their cars and trucks for trees February 7, 1938. All stock is packed where it will not scar the best car. . . . J. U. W. Jones, Dr. T. B. Busbee, Lee Clark and Reuben Neal of Rising Star; Q. Dittmarr, Geronimo; Amos Haynes, Sidney; R. C. Morris, Sidney; H. H. Hancock, Gordon; E. A. Stone, Hico; Frank Bryant, Mrs. J. M. Wise and C. H. Wise of Coleman; Eugene Sunvison, Melvin, J. H. Osborne, Covington; C. Rexroat, Gordon, and W. M. Dunsworth, Brownwood.

Frost Resistant Fruit Trees

Many peach growers are making from \$200 to \$400 per acre annually on peaches. I will tell you their secret. Good trees, frost resistant commercial varieties, good peach land that has good air and water drainage and good care.

Orchard Service

We furnish soil inspection, planting, fertilization, pruning, spraying and cultural supervision on commercial orchards at reasonable prices.

Merchant on Wheels

The truck has brought the grower and the consumer closer together. Hauling fruit from 400 to 1,000 miles is not uncommon. With so many orchard trees dying out and with better transportation facilities there is not enough fruit to supply the demand.

Marked for frost resistance: The Elf means frost resistant; XXX means hardy; XX means reasonably hardy, and X means easily killed.

Let me urge you to come to the nursery. Here you can see this wonderful stock and make your own selection.

May Peaches

BEST MAY. A real free-stone, ripe May 20th. Origin Fayette County, Texas. Fruit is good size, of bright red color all over 10 days before it is ripe. The tree is very prolific and the fruit is a good shipper. I recommend this peach highly for Central and South Texas.

MAYFLOWER. The earliest of all peaches and therefore valuable for both home and commercial planting. Medium size, creamy-white skin, mottled with dark red; juicy and delicious. C. Ripe

May 20th.

ORCHARD OF D. J. JOBES

D. J. Jobes' 70-acre orchard of PECANS and PEACHES at Gorman, Texas. Every fourth tree is a pecan. This is one of the most profitable orchards in Texas. Mr. Jobes has been one of our customers for 10 years. Trees set 30 x 30 feet.

We pay Express and Parcel Post charges on fruit trees.

May Peaches (Continued)

EARLY WHEELER. XXX. The peach we sell for the Early Wheeler is sold by the Stark Nurseries for Red Bird Cling. The Early Wheeler is a shy bearer for me while the Red Bird Cling is a heavy bearer. It is better colored than Early Wheeler and has the same size and shipping qualities.

June Peaches

For South Texas and other mild wintered sections I especially recommend Babcock, Leutichau, Best May and Early Imperial peaches.

THE NEW BABCOCK PEACH. This is the most talked about peach in southern California. I visited Dr. Geo. P. Weldon of Ontario, California, and saw his 40-acre Babcock orchard in 1937.

The peach has high quality, beautiful with fuzzles red cheek and juicy white flesh. It is suitable for home and market use, ripening the latter part of June and will hang on the tree a month after it is ripe. It is a good shipper. The trees frequently bear the first year after planting and the tree attains large size with astonishing speed. Free stone. Price same as Stubenrauch varieties. See page 7.

EARLY ROSE. I was sold on Early Rose good and hard the first time I saw one of the trees in bearing. Each year I have them fruited in my own orchard I like them better. Some years they bear

so much they have to be thinned. Free from rot, good canner, brilliant red, delicious and fine for market. A cling stone ripening June 10th to 15th.

Nine-year Beauty Peaches of Jess Warren, of Comanche, averaging 6 bushels to the tree.

DR. BURTON. I have had Dr. Burton bearing 9 years and have gotten 8 crops. It has led 73 varieties in bearing at the Iowa Park Experiment Station. The tree is a strong grower and healthy. This peach is extra large, white flesh, streaked with red and sweet buttery flavor. Better shipper than Mamie Ross. Freestone. Ripens June 25th.

HILEY. This peach is white, dotted with pink and red, making it a beautiful market peach. It is a freestone ripening about July 1st and is fast becoming a market variety in sections where winters are too mild for Elberta.

LEUTICHAU. This peach is from Florida. It is adapted to sections having mild winters. It is adapted to South Texas and the Gulf Coast Region. It ripens early in June, is a white freestone, colors highly, and is one of the heaviest producers. The size is medium and the flavor very sweet with no acid at all. It seems to be related to the honey peach. The tree is very vigorous.

MAMIE ROSS. Originated in Dallas County, Texas. A very successful and sure bearing variety, very prolific. Large, white with cream blush on one side. White flesh semi-cling. Ripe June 25th.

GOLDEN JUBILEE. XXX. New-Earliest Yellow Freestone ripening about June 20th. A beautiful, very early, large, delicious and similar to Elberta. A better shipper than most early peaches. Blooms late and the tree is vigorous.

FAIR BEAUTY. This peach should only have the Elf after it when it is grown from here North. I do not recommend it for East, Central or South Texas. This variety is sold under several different names, some names being copyrighted. It is called Murrays Beauty in Arkansas. I consider it one of the most profitable early market varieties. It is a yellow peach with a beautiful mottled red cheek, a semi-cling that begins ripening June 10th and ripens for three weeks. Can be hauled several hundred miles to market. The tree is remarkably free from diseases like leaf curl. It ripens at a time when the highest market prices are paid for peaches. By all means plant Beauty peaches if you live in a section as cold as Stephenville. See page 17 for picture in colors.

JUNE PEACHES (Continued)

EARLY IMPERIAL. This yellow freestone of medium sized fruit is an ideal peach for South Texas. The color is beautiful with extra good quality, ripening about July 1st makes it an ideal market peach. Price same as Stubenrauch varieties. See page 7.

HOBSON CLING. I have grown the Hobson Peach for over 20 years and find it to be regular in bearing and one of my favorites. The fruit is size and color of Mamie Ross, more delicious and a good shipper. Ripe July 10th.

July Peaches

CHILOW. XXX. This pure yellow cling should be in every home orchard. There is no peach that will surpass this peach for eating and canning. Medium size and ripe July 25th.

ELBERTA. XX. This yellow freestone is too well known to need description and is still our best seller except the Frank and Fair Beauty. I have a fine strain of Elberta. Ripe July 20th to 25.

ELBERTA SUPREME. XXX. This is a selected strain of Elberta that has the following improvements over the original. It has more color, better quality, smaller and sounder seed, ripens a week earlier and is a much more regular and heavy bearer than the original. As I only have a limited number of trees of this variety I would recommend that you give it a trial especially if you live in sections where the Elberta is a shy bearer.

EARLY ELBERTA. XX. This is one of the most beautiful peaches I have ever grown. It is one-third larger than Elberta with a delicious flavor with plenty of yellow and red to make it bring the highest market price. This variety does not bear so well from Fort Worth south but is very popular in North Texas, Oklahoma and Arkansas. In fact it is fast becoming one of the most popular market varieties over the United States. I have the genuine selected strain. It is a perfect freestone ripening 10 days ahead of Elberta.

SOUTH HAVEN. XXX. Better than average size, prolific, dependable, ripens early, about July 1st, juicy, yellow flesh and a freestone. Not as firm as Elberta but is a good canning peach and a good market peach.

INDIAN CLING. I have a neighbor who bought some Indian peach trees out of Arkansas 25 years ago. These trees are still healthy and bearing the finest large, red fleshed, blood skinned peaches I have ever seen. I have three of them in my office that fill a half gallon jar. I will pay \$25.00 for buds of a better Indian than I have.

J. H. HALE. XX. There is a big difference in Hale peaches. I got my start from F. O. Garrison of Weatherford, who won the Grand Prize at the Parker County Peach Show. One of the finest freestone peaches grown in color, flavor and shipping quality. Plant with Frank for pollination. Ripe July 28th.

ELBERTA CLING. XXX. There is no need for paying three prices for this wonderful peach. D. J. Jobes of Gorman has a large planting of this variety and considers it one of his best market varieties due to its color, quality, shipping quality and production. Ripe with Elberta.

HALEHAVEN. XXX. This peach is a cross between South Haven and J. H. Hale. A large, beautifully colored yellow fleshed peach, ripening two weeks ahead of Elberta. A perfect freestone, strong thrifty grower, splendid shipper and an extremely heavy bearer. It has an exceptionally fine flavor and is very hardy. It colors highly 10 days before ripening, therefore a good shipper. It bears early and ripens at a time when peaches are in demand. It should be in every orchard. Price same as Stubenrauch peaches. See page 7.

JUNEBERTA. XXX. A yellow semi-cling with red blush ripening a month before Elberta. Good quality and a high producer.

Geo. Robertson's, of Goldthwaite, 385 trees of 4-year Franks produced over 1,000 bushels 1937 selling for \$1.50 per bushel.

P. B. Cate, of Mexia, Texas, grows Frank, Katy, Tena, and Barbara Peaches and likes them because they make money every year.

HART CLING. XXXX. This is the popular peach of Parker County, Texas. It is white with red next to the seed, red cheek and an extra good bearer and shipper. Fine for canning. Half of Parker County's commercial crop is Hart Cling. Ripe August 10th.

LEONA. XXX. This is another yellow freestone, ripe one week ahead of Elberta. It is very popular among the peach growers, many of whom sell the fruit for Elberta. It is better in color and quality. You will like Leona.

JULY PEACHES

(Continued)

SMITH. This little, white freestone should be in every home orchard because it bears tremendous crops every year and because of that honey sweet flavor.

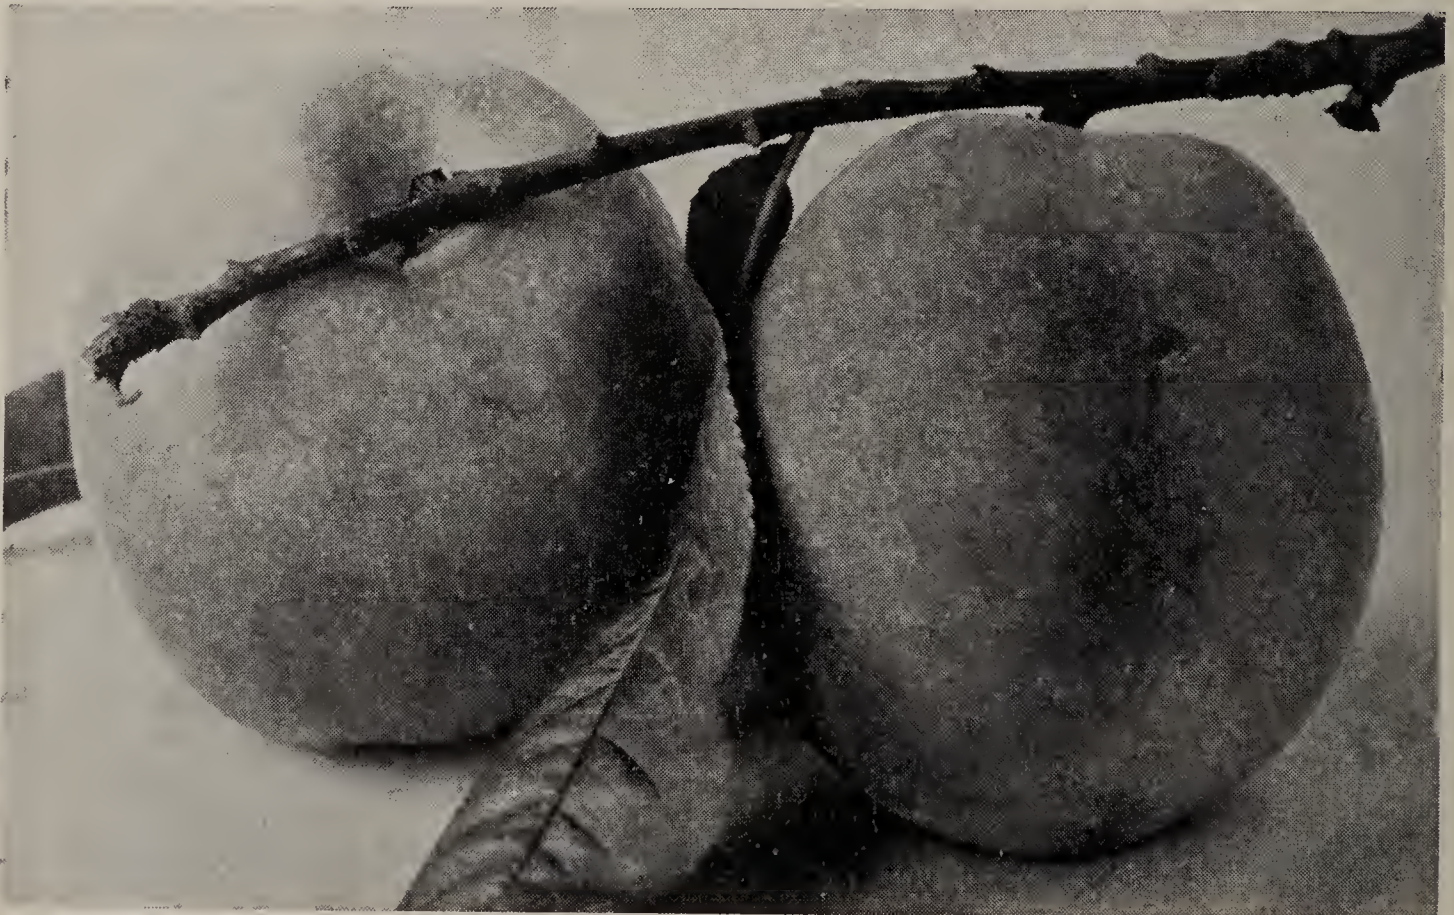

I like to go to my Smith trees and eat the fruit right off the tree. Ripe July 10th to 15th.

BELL OF GEORGIA. Very large, white fleshed with red cheek; firm, juicy and excellent flavor. Very hardy and grows with equal success in both North and South. Productive, early semi-free to freestone. The most beautiful white peach grown and a good canner. Ripe July 20th.

October Peach

SURPRISE. XXXX. This large white clingstone gets ripe the latter part of October and will hang on the tree two weeks after getting ripe. It is good to eat as well as can, pickle and preserve. Due to its quality, color and time of ripening it has a great future as a market variety. It always wins in the late fall shows.

The Frankie Peach described on Page 8

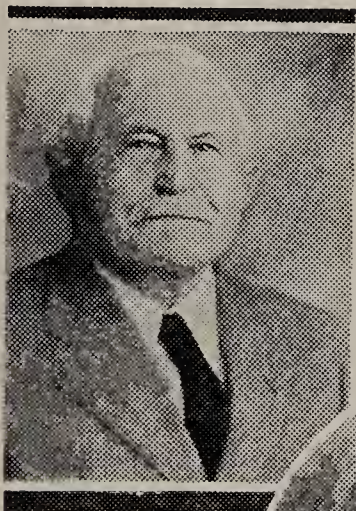

WE PREPAY EXPRESS AND PARCEL POST CHARGES ON FRUIT TREES

THE FAMOUS STUBENRAUCH PEACHES

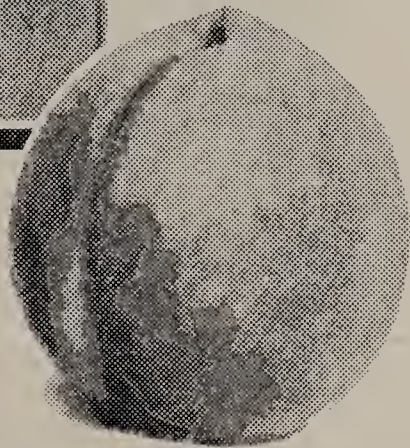

We have arranged with Mr. J. W. Stubenrauch of Mexia, Texas, to grow his best peaches, the Frank, Katy, Tena, Frankie, Barbara and Anna which have become popular due to their frost resistance, vigor of trees and quality of fruit.

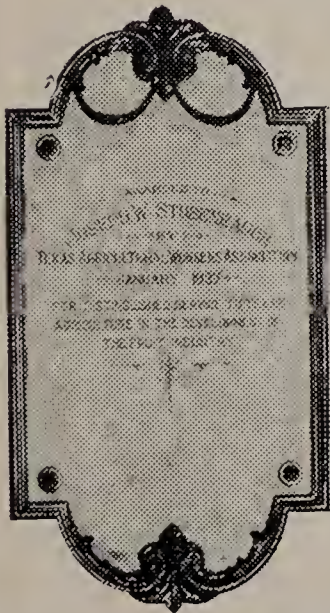

F. B. Bond of Mexia, with 6-year-old Frank producing tree-breaking crops every year. "The most perfect peach."

Mr. J. W.
Stubenrauch,
Mexia, Texas

The Frank Peach
has not missed a
crop in 36 years.

Medal awarded to J. W. Stubenrauch, 1936, by The Texas Agricultural Workers' Association for his peach breeding work.

FRANK. I could put another X after Frank for frost resistance. A cross between Elberta and Bell's October that is fast becoming Texas' most popular peach. This yellow cling, named for Frank Holland of Farm and Ranch, begins to ripen just as Elberta is playing out about August 5th-10th and will hang on the trees without injury several days after it is ripe. A beautiful peach, yellow flesh, small sound seed, firm, delicious, sweet flesh and juice. The tree is an extra strong grower, early bearer and heavy producer. The fruit should be thinned (before the seeds are hard) to secure the proper size and quality. If you want the best peach on earth for home or market, plant the Frank. See inside front cover for photograph in colors.

TENA. XXX. Similar to Elberta in color and shape but from one week to ten days earlier in ripening. It has a brighter red color than Elberta and the quality is much better. It is a cross of Mamie Ross with Elberta. It blooms late with Mamie Ross and is rarely injured by cold. This high-class yellow freestone beats the Elberta to Market.

3-4 ft.33	.27	.20
4-5 ft.55	.50	.45
5-7 ft.65	.55	.50

BARBARA. XXX. A sister seedling of Frank but a freestone. It has the same vigor of tree and sure bearing habit of Frank. The peach is larger than Frank with a beautiful shape, being pointed at the lower end. It is a good canner and shipper. A fifteen-year-old tree in the Stubenrauch Orchard has a spread of 37 feet and has borne 10 bushels at several different times. It ripens August 10th with the Frank.

KATY. XXX. Katy is the largest yellow freestone peach. Sometimes a single peach weighs one pound. It is a beautiful shape, color and the best of quality. Blooms late and rarely ever bit by frost or cold. It is also an Elberta and Bells October cross. It begins to ripen as the Barbara and Frank pass out.

FRANKIE. This is what we have been looking for—a freestone Frank. This variety was discovered in the orchard of Kurt Schroeter of Marble Falls, which came to him in a shipment of Frank trees. It

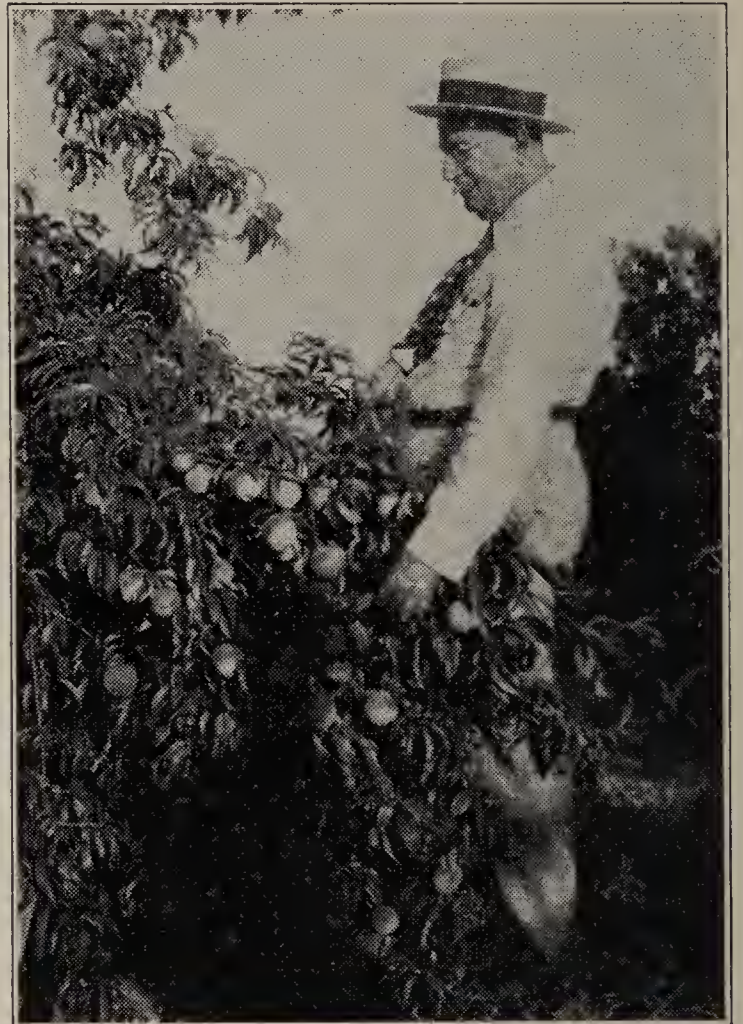

is a perfect freestone.

Mr. Schroeter has fruited this peach alongside the Frank for several years and considers it as profitable as the Frank. It is a good producer, even in years of late frost. The color is beautiful, being yellow with a liberal spread of red on cheek. It is one of the best shipping peaches I have ever seen. It ripens about August 20th. I believe this peach will make peach history. I only have a few thousand trees of this variety in all. Prices same as other Stubenrauch varieties.

and shipping.

ANNA. A decided favorite of Mr. Stubenrauch. It is medium size, white freestone. Small seed with red flesh next to the seed. Very sweet, ripening about June 10th. Rather tender for long hauls

J. E. Spencer, of Cisco, inspecting Frank Peaches of F. B. Bond, Mexia, Texas. Franks bear annually.

**COME TO THE NURSERY AND
SAVE ON ALL STOCK.**

A Request

Mexia, Texas, June 7, 1938.

MR. ROSS R. WOLFE,
Stephenville, Texas.
Dear Friend:

Realizing the active part of my life is drawing to a close, it is my desire and request that you propagate and disseminate the desirable peach varieties that I have bred and created and that you will continue the breeding work which I have done.

Signed,

J. W. STUBENRAUCH.

What Others Say About the Frank Peach

"The Frank Peach possesses every good quality."—F. B. Bond, Mexia, Texas.

"I put the Frank at the top of the list."—Fernando Miller, Somerset, Texas.

"My Franks have not missed a crop in twenty-one years. It is the Acme of Perfection in a peach."—W. M. Jones, Tehuacana, Texas.

"The Frank is ideally suited to this locality; it out-bears the Elberta five to one."—George Robertson, Goldthwaite, Texas.

"I sold my Franks on the Houston and San Antonio markets from \$1.75 to \$2.75 per bushel."—Kurt Schroeter, Marble Falls, Texas.

"I regard it (Frank) as the most promising variety and surest bearer."—J. R. Eanes, Comanche, Texas.

"Frank produces good crops when Elberta freezes out."—Homer Hutchins, Grandview, Texas.

"The Frank means a new era in the peach business. It will keep from a week to ten days after being gathered and can be hauled to distant markets in fine condition. My seven-year Frank peach trees have averaged $6\frac{1}{2}$ bushels per tree each year for the last four years."—Luther Cox, Mexia, Texas.

"The most outstanding peach produced in the Southwest."—Farm and Ranch.

See Frank Peach, illustrated in natural color inside front cover.

Below—Kurt Schroeter, of Marble Falls, puts Frank and Frankie at the top of the list. This Frank produced 12 bushels.

Luther Cox, Mexia, Texas, has averaged over \$400 per acre on Franks for 5 years (no failures). This tree produced 20 bushels in 1936-37.

MISSOURI STATE FRUIT EXPERIMENT STATION

Mountain Grove, Missouri
Paul H. Shepard, Director

Mr. Ross R. Wolfe,
Wolfe's Nursery,
Stephenville, Texas.

Dear Sir:

We have had the Frank peach growing here at our station for about eight years. Of the 150 varieties we grow here, it is one of the half dozen that we recommend highly for plantings in South Missouri. It grows a fine tree, buds are hardy, and resistant to leaf spot.

Yours truly,

PAUL H. SHEPARD,
Director.

Selection of Varieties

BEST PEACHES FOR SOUTH AND SOUTHWEST TEXAS: Best May, Chilow, Hobson Cling, Leona, Leutichau, Mayflower, Mamie Ross, Smith, Indian, Frankie, Early Imperial and Hiley.

BEST PEACHES FOR THE PLAINS: Belle of Georgia, Early Wheeler, Frank, J. H. Hale, Henrietta, Hobson Cling, Leona, Mamie Ross, Late Crawford, Beauty, Halehaven, Golden Jubilee, South Haven, and Dr. Burton.

BEST PEACHES FOR NORTH AND CENTRAL TEXAS: Frank, Tena, Katy, Barbara, Ann, Frankie, Best May, Chilow, Early Wheeler, Indian, Halehaven, South Haven, Golden Jubilee, Mayflower, Hobson, and Dr. Burton.

Plums

Our stock of plum trees is unusually fine. Prices prepaid.

The Elf means frost resistant; XXX means hardy; XX means reasonably hardy and X means easily killed.

PRICES ON PLUMS SAME AS PEACHES

SIX WEEKS. The earliest good plum on the market. Large, rich, red and delicious. Ripe May 20th.

AMERICA. Tree very thrifty, symmetrical, spreading, fruit medium to large, bright golden ground with pink cheeks, flesh firm, stone medium to large, cling. Ripe June 20th. Best commercial plum.

BURBANK. Large, clear purplish red, flesh deep yellow, very sweet and agreeable flavor. Very prolific. Ripens about June 25th. Prune Burbank each year for best results.

SHIRO. XXX. One of the most desirable plums over a wide area. Large to very large, oblong, clear, transparent yellow, with very small seed; firm and fine texture, quality unsurpassed for eating and for cooking purposes. Ripe in July.

Below: Burbank Plums

BRUCE. Large, red, productive. A hybrid originated by Mr. A. L. Bruce of Donley County, Texas. On account of early ripening, large size, firm shipping quality, productiveness and deliciousness of flavor, we believe we should have to consider this the most profitable of all plums.

ELACK BEAUTY PLUM. Very sweet and almost black when fully ripe. Medium in size and ripe July 1st. Recommended by Charlie Denny of Comanche as one of the best commercial plums.

WANETA. Fruit is dark purple with purple red flesh, very prolific often bearing in the nursery row at one year. Ripe June 25th.

MILTON. A valuable variety for family orchards, large, round; deep red with white flecks, blooms late and is highly productive. Ripe June 10th.

OMAHA. Why pay other nurseries a high price for Omaha trees when you can get the genuine from us. This red meaty sweet delicious plum blooms late and escapes frost. Ripening July 10th.

SANTA ROSA. XX. June 20th. One of the largest and most beautiful plums. Too beautiful to describe. This is the leading commercial plum for southern California, well adapted to South Texas and sections having a similar climate. Two inches in diameter, purplish red inside and out.

GOLD PLUM. XXX. Similar to America but larger and sweeter, ripening July 1st.

THE MUNSON PLUM. When I tasted the Munson Plum I said it is as yellow as gold and as sweet as honey. It gets ripe June 1st when berries are at their best. The Munson and Bruce should not only be in every home orchard, but should be raised by all having blackberries or dewberries to sell. The Munson Plum is a great find.

PRICES ON MUNSON PLUM TREES — PREPAID

1-2 feet	\$.25	\$.20
2-3 feet	.35	.30
3-4 feet	.50	.45
4-5 feet	.75	.70

METHLEY. XXX. This large red plum is red fleshed with more than 4 inches in circumference, was introduced from South Africa. It ripens May 25th and is growing in popularity as a good market variety. It is a good shipper.

Plum-Cherry

OPATA. Tree very beautiful when in bloom and very fragrant. Fruit medium, purplish red, splashed with green, flesh greenish color and very fine flavor. Cling-stone. Ripe last of June and first of July.

COMPASS. XXX. Tree a vigorous grower, hardy, prolific, and bears extremely young, often fruiting in the nursery row. Fruit rather small, dark red, good for cooking purposes. Ripe in June.

SAPA. Tree dwarfish, thrifty and often sets fruit at one year of age. Fruit large, dark purple with greenish splotches, flesh rich, dark purple-red of rich flavor and with small pit. Ripe last of June and excellent for cooking.

The Opata and Sapa Plum-Cherry originated in Dakota and will stand our cold perfectly.

PRICES ON PLUM CHERRY SAME AS PEACH, PAGE 3

Apricots

By planting Improved Cluster and Moorpark Apricots you can have apricots ripening for a month. We have the surest bearing apricots to be had.

IMPROVED CLUSTER. XXX. I believe this is a seedling of the cluster. It bears like cluster yet it has no objectionable fiber. Ripe June 4th.

MOORPARK. XXX. I like the Moorpark on account of its bearing, size and quality of fruit. The seed is small, flesh yellow and tender with a flavor unexcelled.

German Prune

This is an even cross between plum and prune that will grow and bear in Texas. The size of the fruit is from 1½ inches to 2 inches in diameter, round in shape, blue black in color with reddish meat and very small seed. The fruit is very delicious and is good for jelly, preserves and canning. Ripens from July 10th to 20th and will stay on the trees several days after ripening. It can be marketed with the Elberta Peach. I secured my start of this from ten-year-old tree in Comanche, Texas, which was over one foot in diameter. It has produced a crop of fruit every year.

—Stark.

Red Nectarine

RED NECTARINE. XXX. The Nectarine is a bud sport of the peach, and is not a cross. The Nectarine tree is identical with the peach tree and its climatic and cultural requirements. Its smooth fuzzless skin, however, and distinctive and delicious flavor make it popular wherever it is known.

The fruit is medium sized, red in color, semi-cling of extra good flavor. Tree a medium grower and good bearer, earliest of the shipping nectarines. Carries well to market. Ripe in late June. Price: 18-24 inch trees, 35c each; 2-3 foot trees, 50c; 3-4 foot, 65c; 4-6 foot, 80c, prepaid.

Apples

Texas is rapidly pushing to the front as an apple State. The varieties we are listing have borne very satisfactory crops of high quality fruit in this territory.

Trees Same Price as Pear

DELICIOUS. I raised Delicious apples this year that weighed nearly one pound apiece. I don't think I ever tasted a better flavored Delicious raised anywhere. Ripe in September and October.

KING DAVID. Mr. J. Frank Browning of Baird, Texas, who has the largest apple orchard in this section, places the King David as his first choice. These red apples which get ripe in August sell like hot cakes. King David and Golden Delicious are good pollinators for Delicious.

Pears

The trees are beautiful and live to a ripe old age. You will like our pear trees. Mellow pears are healthy. This list of select varieties has been reduced to such as have been thoroughly tested and proven valuable throughout the largest section of the South.

BARTLETT. Large, buttery, melting, of rich flavor. Very popular. Ripens last of July and during August.

DOUGLAS. See page 19.

GARBER. Resembles the Kieffer in size, appearance and quality, but matures here in August and between the Le Conte and Kieffer. A thrifty grower and valuable variety. Good to eat.

LE CONTE. Medium, bell shaped, creamy yellow with red cheek. A fine pear to eat right off the tree. Ripe July 25th. Preferred in South Texas.

KIEFFER. Fruit large to very large, skin yellow, with a light vermillion cheek, flesh brittle, very juicy with a marked mushy aroma, quality good, matures from September to October. Tree vigorous and very prolific. Begins to bear when four years old.

Delicious Apple

WE PREPAY EXPRESS AND PARCEL POST CHARGES ON FRUIT TREES

APPLES (Continued)

DOUBLE RED DELICIOUS. The Double Red Delicious is just like Delicious except it has more color. \$5,000.00 was paid for the original limb. I have the genuine stock.

JONATHAN. The Jonathan apple is not so large but it makes up for this in color, quality and heavy bearing. It gets ripe in this section in September.

YELLOW TRANSPARENT. This mellow, yellow apple really gets ripe about June 10th. The trees are very prolific and the apple is good for cooking and for early market.

GOLDEN DELICIOUS. This apple is just like Delicious except it is a golden yellow; it is a good keeper. Yellow Delicious will make you money.

Crab Apple Trees
Price Same as Apples

TRANSCENDANT. July. An attractive yellow color, splashed and striped with red; bears very young. We value it highly for preserves. Buds and blossoms exquisitely beautiful.

Mulberries

HICKS MULBERRY. A strong, upright, fast-growing tree with dense foliage, thriving anywhere and furnishing excellent shade. Bears good sized delicious black berries. A tree for bird-lover, whether it be robins and bluebirds, or only white leghorns. Splendid for chicken runs. Prices: 8-10 ft., \$1.25; 6-8 ft., \$1.00; 4-6 ft., 75c; 3-4 ft., 50c, postpaid.

Cherry Trees

MONTMORENCY. Bright red, delicious flavor, firm fleshed for preserves, cobblers and puddings. The greatest American Canning Cherry. Tree hardy, strong, disease resistant, less affected by wet weather. Young sure bearer.

RICHMOND. Leading early sour cherry. Ripens June 15th. Fine for pies.

EAT MORE FIGS FOR HEALTH SAKE

Figs ripen every day from June 15th till frost. Figs should be planted more extensively, do not let the sprouts and suckers grow, but prune the trees so as to have clean bodies at least two feet high. Cut tops back to six or twelve inches above ground when planting. Such trees will bear full and will stand much colder weather than if the sprouts are allowed to grow.

MAGNOLIA. Very large, brownish straw color, excellent for canning and for preserves. Will bear on one year stems. More widely known than any of the other figs. Bears over a long period, having young green fruit at the same time as mature ripe fruit.

BROWN TURKEY. Medium size, purplish-brown, sweet and good. Very prolific. Has habit of bearing on new wood, even fruiting in the nursery row.

RAMSEY. This fig has been our earliest and heaviest bearer. The fruit is a light straw color, large and sweet. You will get enough figs from one of our Ramsey figs the first year to pay for it. It bears heavy in the nursery.

CELESTIAL. July. The common little blue fig. None is sweeter and very hardy.

Persimmons

The leading fruit of the lower South. Demand increasing far in excess of their supply. They bear very young, bear every year, the fruit is ornamental, delicious and easily sold.

DATA MARU. This is my largest persimmon and first to ripen. The fruit is yellow and one of the largest grown. I grew 60 of these fruits last year that measured one bushel.

EUREKA. If you like your persimmons soft, to be eaten as a salad fruit, you will want to plant the popular Eureka. Every year more people are enjoying in November and December ripe Eureka with lemon juice, sugar and cream, a dish fit for a king. The Eureka is a hardy variety that bears profuse crops of fruits which look like big red tomatoes. Our strain of Eureka is almost seedless.

TANE-NASH. Very large, roundish conical, pointed very smooth and symmetrical, color of skin light yellow changing to bright red at full maturity, flesh yellow, generally seedless, astringent until fully ripe, then one of the best.

NOTICE—IMPORTANT

I have bought the Munson Vineyard of Denison, Texas, and will have America's finest grapes to offer you. Mr. Munson tested over a thousand varieties of grapes and originated more than sixty kinds.

The celebrated Munson Grapes are favorably known not only in the U. S. but all over the civilized world.

The government of France conferred on him a cross of honor for his work.

MARGUERITE. Self fertile. Growth very strong. Immune from mildew. Cluster and berries medium in size but larger than Herbemont. Bears heavily on long arm pruning. Ripens late and will hang on through September. Makes a fine white wine. Very sweet and agreeable flavor.

NIAGARA. Self fertile. Vine medium in vigor. Berries large yellowish green at maturity. Very popular. Good quality.

R. W. MUNSON. Should be planted with Concord and Brilliant for perfect pollination. Bears heavily on long pruning. Berries black and medium to large. A good commercial variety.

ELLEN SCOTT. Self fertile. Stocky, vigorous grower, berries large to very large. Violet color. Skin does not crack. A splendid table or commercial grape of fine flavor.

CLOETA. Self fertile. Very vigorous growth. Black berries of medium size. Clusters conical and fair size. A splendid wine grape. Juice claret in color.

CONCORD. Self fertile. One of the best known grapes. Splendid market grape and very popular in Arkansas.

Grapes—Niagara

PRICES ON STANDARD VARIETIES OF GRAPES—PREPAID

STANDARD VARIETIES OF GRAPES (Continued)

MUENCH. Self fertile. Vigorous and free from all diseases. Clusters large and berries medium to large. Purplish black color. Ripens after Herbemont.

AMERICA. Should be planted with Beacon or Concord. Growth very strong. Bears heavily with long arm pruning. Berries black and medium size. Adapted to all sections, north and south. A splendid wine grape and good for the table when fully ripe.

HEADLIGHT. Should be set near Beacon, Carman or Concord for pollination. A medium size berry, clear red, very sweet. Earliest American grape. Ripens latter part of June.

ARMALAGA. Self fertile. Vine very prolific. Large yellowish white berries. Clusters large to very large. Quality of the best. Especially adapted to Gulf Coast area. Ripe August 10th to 20th.

DR. COLLIER. Self fertile. Vine vigorous. Prolific. Berries large clear red. Clusters rather open. Quality good when fully ripe. Regarded in Oklahoma as most profitable market grape. Ripe in July.

RUPERT. Fair grower. Large berries. Large to very large clusters. Perhaps the latest to ripen of all domestic grapes. Will hang on vines until freezing weather.

RONALDO. Self fertile. Good grower. Prolific. Long large clusters of good size, white berries. Full sister to Edna. Fine table and market grape.

CAPTIVATOR. Self fertile. Vigorous grower. Large red berries. Large compact clusters. Skin thin but tough. Most delicious flavor. One of the very best late July grapes.

LONGFELLOW. Self fertile. Fair grower, very prolific. Berries large black. Clusters very long, up to 12 inches. One of the most attractive show grapes and quality of the highest. Adapted to all types of soil. Ripe late August.

BRILLIANT. Self fertile. Growth strong. Berries large, color light to dark red. Clusters large. Delicious flavor. Prolific. Ripe July 10th.

CAPTAIN. Should be planted near Beacon, Concord or R. W. Munson. Very vigorous and prolific. Large black berries. Quality very much better than Concord. Fine market, table or wine grape.

ALBANIA. Self fertile. Vine very vigorous, berries medium. White wine grape. White skin and tough. Clusters large, compact. Latest white grape and near the best. Specially adapted to West Texas.

Fern—Marguerite

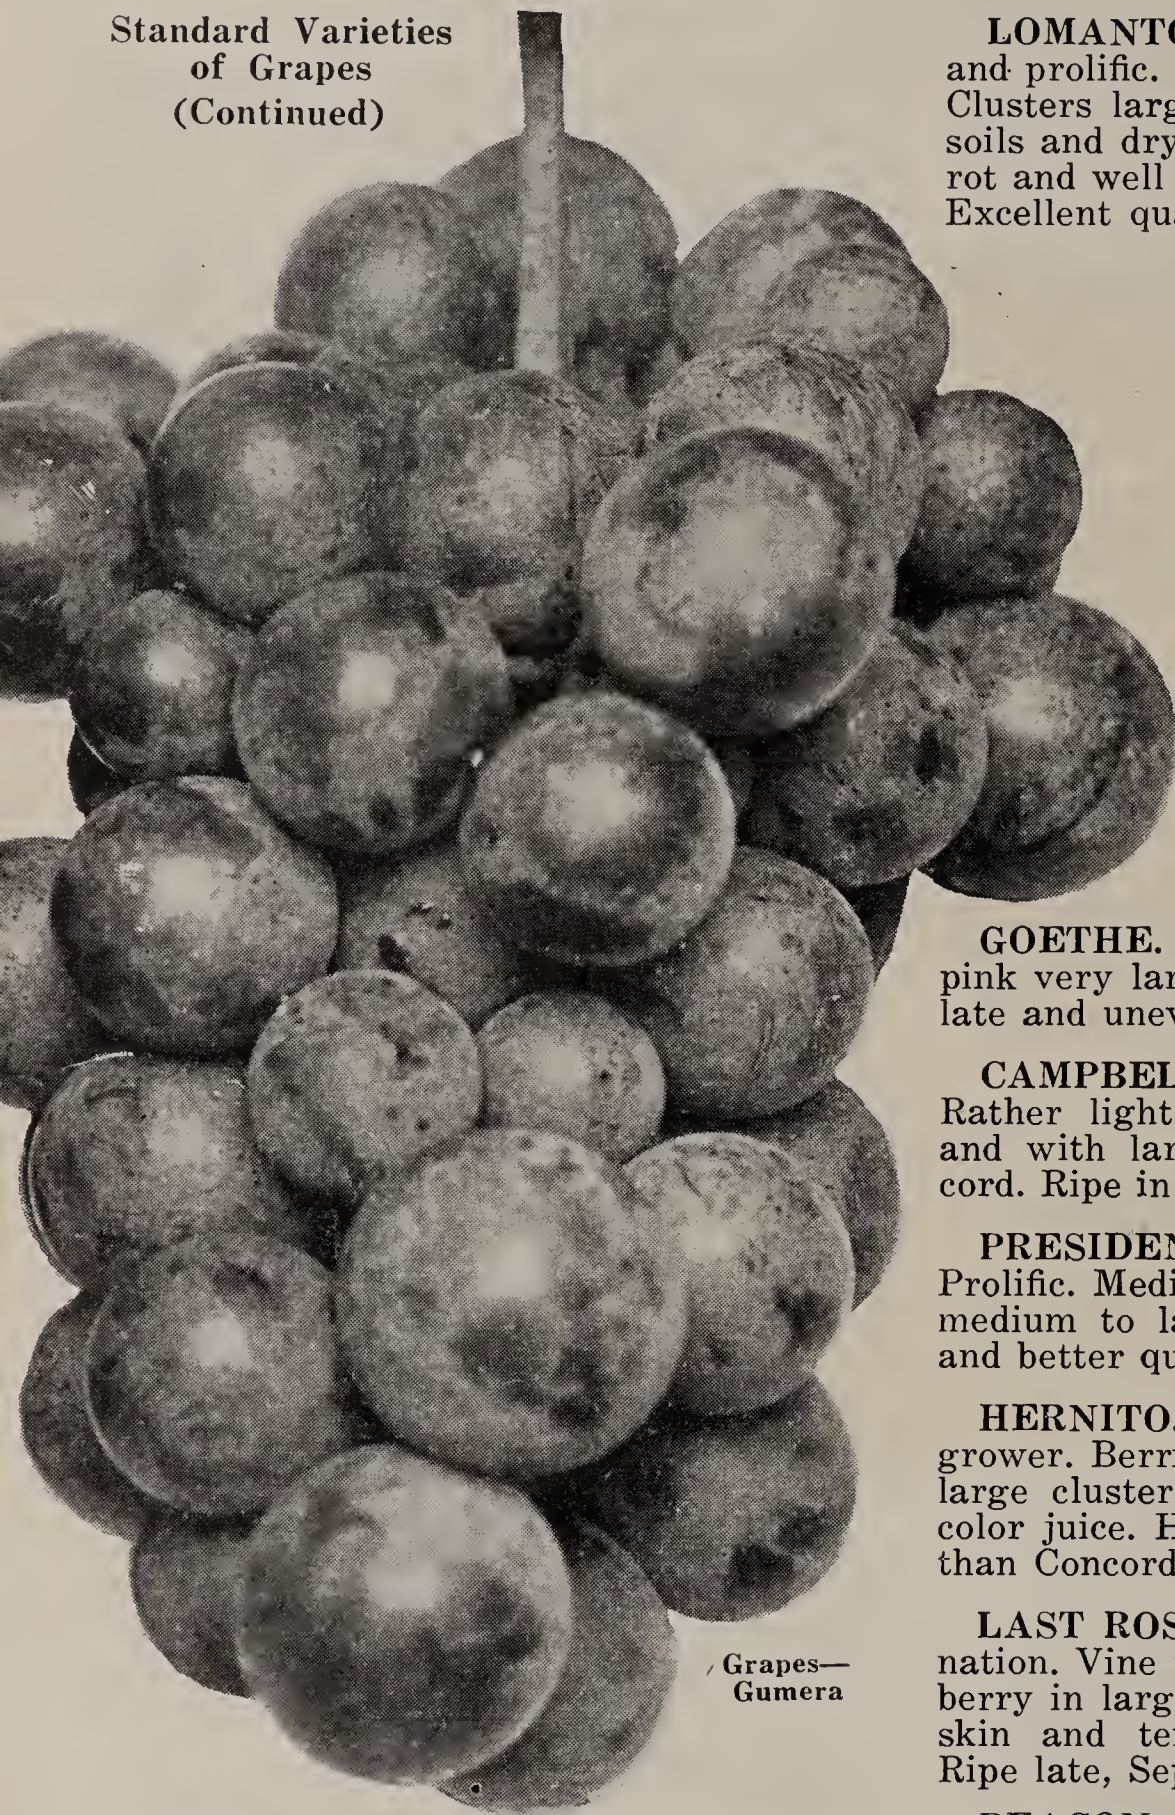

MERICADEL. Self fertile. Vine vigorous and very productive. Berries medium in size and purple thin skin but tough. Large compact clusters. Best quality. Table, market and juice. Ripe August 1st.

FERN MUNSON. Self fertile. Growth very strong. Medium to large red purplish berries. Catawba flavor when fully ripe. Clusters large, long. Ripens late in August and hangs on until frost. Adapted to both north and south. Very hardy.

CARMAN. Black large bunches. Self fertile. Very prolific. Immune to leaf folder and mildew. Vigorous grower. Berries never crack. Quality good.

BAILEY. Self fertile. Very strong grower. Large black berries. Clusters large to very large. Good quality. Well adapted to South, Central and Southwest Texas and one of the best commercial grapes. Ripe August 20th.

Standard Varieties
of Grapes
(Continued)

Grapes—
Gumera

BELL. Vigorous, healthy vine. Sure producer. Greenish, yellow berries. Medium compact cluster. Free from mildew and leaf folder. Fine quality. Ripe July 20th.

WAPANUKA. Self fertile. Medium growth. Berries large greenish white. Skin thin but tough. Clusters medium to large. Very prolific. One of the best table grapes produced in the United States. Succeeds well both north and south and endures drouth in west well.

CATAWBA. Self fertile. Found in 1801 in North Carolina. Vine vigorous. Berries above medium. Clear dark red. Medium cluster. Exquisite flavor. Fine table and wine grape. Ripe August 20th.

LOMANTO. Self fertile. Vine vigorous and prolific. Berries black. Medium to large. Clusters large. A valuable variety for limy soils and dry hot weather. Resistant to root rot and well adapted for the coastal section. Excellent quality.

AMERICAN
GRAPE
CULTURE

New Low Price
See Page 21

GOETHE. Self fertile. Vigorous vine. Pale pink very large berries. Fine flavor. Ripens late and uneven.

CAMPBELL'S EARLY. Self fertile. Rather light grower. Large black berries and with large clusters. Better than Concord. Ripe in July.

PRESIDENT. Self fertile. Strong grower. Prolific. Medium size black berries. Clusters medium to large. Ripe with Moores Early and better quality. July.

HERNITO. Self fertile. Strong vigorous grower. Berries large and black. Medium to large clusters. Hangs on vine well. Claret color juice. High in acid and sugar. Earlier than Concord.

LAST ROSE. Plant near Extra for pollination. Vine robust, healthy. Large rich red berry in large compact clusters. Thin tough skin and tender flesh. Excellent quality. Ripe late, September 20th.

BEACON. Self fertile. Strong grower, very prolific. Berries large as Concord and black. Clusters moderately compact. Skin never cracks. Bears very heavily as far north as Illinois. A profitable market grape. Ripe here July 25th. Very fine for jellies.

LINDLEY. Plant near Delaware or Brilliant. Vine vigorous. Berries large, brick red. Clusters above medium. Thin, tough skin, tender flesh, juicy and very fine flavor. Ripe in July.

BRIGHTON. Plant near Brilliant. Vine vigorous. Berries medium to large, bright red. cluster large and fairly compact. Thin skin, tender pulp. Profitable from Texas to Michigan. Fine quality. Ripe in July.

THE FAIR BEAUTY PEACH

FAIR BEAUTY (XXX)

(Photographed in Color)

For a complete description of this beautiful
Peach see Page 4.

**We Sold Twice As Many Trees of This
Variety Last Season as Elberta**

The policy of the Wolfe Nursery has always been to bring you the new varieties when they are new—but we do not now—or have we ever recommended any plant that was not, to our knowledge, exactly as we represented it to be, as to its productiveness or adaptability to this climate.

THE HOLLAND APPLE

HOLLAND APPLE

(Photographed in Color)

This apple from Weatherford, Texas, was called to our attention by the largest and most successful fruit grower in Texas, Mr. R. B. Alexander. For more than 30 years it has been a consistent and heavy producer. The fruit is large, firm, delicious and ripens with the Frank Peach. It is a show to see this apple in production. **The price on trees is the same as Douglas Pear Trees.** See Page 19.

**WE HAVE THE EXCLUSIVE RIGHTS ON
HOLLAND APPLE**

THE ALLRED PLUM

ALLRED PLUM

In my quest for novel and fine fruits I consider this a great find. The original tree from which I secured buds is growing in Hot Springs, Arkansas, and was brought there from Europe about 12 years ago. The leaf is a purplish red and the fruit is red inside and out. This plum is medium in size and excellent quality. This tree is highly ornamental and produces regular crops of high quality fruit.

Trees: 2-3 ft., 40c each; 3-4 ft., 60c each; 4-6 ft., 75c each, postpaid.

STANDARD VARIETIES OF GRAPES (Continued)

EXTRA. Self fertile. Growth strong. Medium black berries. Very juicy. Hangs on late. Ripe about August 10th. Splendid for wine, juice and jellies.

CHAMPANEL. Self fertile. Black berries, thin tough skin, tender pulp. Adapted to any soil but especially adapted to black waxy soils. Ripe with Concord. Good shipper and withstands dry, hot weather. Plant 10-12 feet apart in rows.

HERBEMONT. Self fertile. Very vigorous grower, healthy and long lived throughout the South. Prolific, berries dull brownish red, small but very juicy. High in both sugar and acid content and an excellent wine grape. Ripe three weeks ahead of Concord.

BLACK SPANISH. Prolific. Clusters open but large with small berries. Fine for wine. Well adapted to the Southwest.

SPECIAL VARIETIES OF GRAPES

THOMPSON SEEDLESS. Strong and vigorous grower. Berries small greenish white, large compact bunches. Adapted to South and Southwest Texas. An excellent table grape.

COLUMBIAN (Union Village). Vine vigorous and prolific. Berries immense in size, purple and ripens unevenly and late in August. Chiefly used for jellies.

MISSION. Brought to America by Padres. California's finest table and wine grape. Growing very popular in West Texas.

GUMERA. Imported from Greece. Seems perfectly adapted to our climate. Berries very large, purple, thin skin with few seed. Bunches extra large, weighing up to three pounds.

VIOLET CHASSELAS (European Grape). Vigorous grower. Berries and clusters large, violet, beautiful and excellent quality. If sprayed will succeed all through the South. Adapted to climate like Pecos and El Paso.

BACHMAN'S EARLY. Self fertile. Vigorous growers. Quality of the very best. Berries and clusters large. Fruit black. Try this grape and you will agree that it is a winner. Ripe in early July.

FREDONIA. Vine vigorous and hardy. Large black berries. Large tapering clusters. Quality very good and is fast growing in popularity as an early black grape.

MINNIE. Self fertile. Medium growth. Large white grape. Medium clusters. Extra good flavor and quality of the best.

CACO. A cross of Concord and Catawba. Most delicious flavor. Fair size bunches of large pink fruit. Ripe July 10th.

EDNA. Should be planted with Ellen Scott or Armalaga for pollination. Strong vine. Beautiful white grape. Good clusters, finest muscat flavor. Large berries. One of the best table and nearby market varieties.

WINE KING. Self fertile. Vigorous vine. Small violet berries with thin skin, tender and juicy pulp. Long clusters. Ripe about August 1st. Best wine grape and free from disease.

DELICATESSEN. Self fertile. Vine vigorous. Medium black berries. Clusters fairly compact. Juice clear red. A good table, market and wine grape. Ripe August 1st.

SOUTHERN SCUPPERNONG GRAPES. Very popular in the Old South, where it is best known. Has most delicious, musky odor and taste. Berries large, golden color. Makes delicious wine. Vines very vigorous and long lived. Grow well on arbors or trellises. Plant at least 16 feet apart. Plant one male to ten female. Price, 50c each, postpaid.

"The Foundation of American Grape Culture"

Written by the late T. V. Munson. This wonderful book contains 252 pages with 87 full page illustrations. Contains all the necessary information for growing grapes such as preparation of soil, planting, cultivation and pruning. It is beautifully printed and bound and contains references to all the best known varieties grown on this continent as well as some of the best known imports. If you are at all interested in grapes you cannot afford to be without this outstanding book.

REDUCED PRICE IS \$1.50 PER COPY, POSTPAID

BERRIES FOR TABLE, PRESERVES AND MARKET

BOYSEN BERRIES. Boysen Berries are money makers. In 1935 I visited the famous Knott Berry Place at Buena Park, California, and saw a large acreage of Boysen Berries in full bearing. So many people had come to see this wonderful new berry that cars were parked up and down the highway for several hundred yards. I had to wait some time before I could get an introduction to Mr. Knott and let him describe and show me this berry which was at the peak of its ripening, June 20th. He has written me since that he has gotten 11,500 pounds of Boysen Berries per acre.

The berry looks like a Young Berry and has a very similar flavor, but the fruit is twice as large, single berries frequently measuring 2 inches long. Mr. Knott realized \$1,760.00 per acre from these berries in 1934.

The Boysen Berry Plants have been very high, 20c each, but since I am growing these plants myself, I am going to make them at a much cheaper price. Prices prepaid. 10 plants for \$1.25; 50 plants for \$4.95; 100 plants for \$8.90; 500 plants for \$40.00.

Note: Our Boysen Berry plants will not be ready to ship until late in January.

AUSTIN DEWBERRY. This is the hardest and most prolific dewberry and is the first berry to ripen. Prices prepaid, 10 plants for 60c; 50 plants for \$2.00; 100 plants for \$3.25.

We recommend that our customers plant Black Beauty instead of Austin.

YOUNGBERRIES. This is a cross between a dewberry and a logan berry originating in Louisiana. Its popularity is growing rapidly in Texas and Oklahoma. As people know this berry, its planting will increase by leaps and bounds. Price 10 plants for 80c; 50 plants for \$2.50; 100 plants for \$4.00, prepaid.

DENTON BLACKBERRY. I first saw this berry at Denton, Texas, where it is known and very popular. It seems to be a cross between a raspberry and blackberry. The berries are medium to large, jet black and as sweet as a mulberry. Begins ripening last of June and ripens for 2 months. Plants, \$1.00 for 12. Postpaid. Not more than 1 dozen sold to a customer.

BLACK BEAUTY BERRY. This is an improved Austin Dewberry, originated by our good nurseryman friend, J. Emerson Price of Denton County, Texas. He found the plant in a patch of Austin Dewberries. The berry is larger with the same quality and more prolific than the mother variety. Plants, 95c per dozen; \$6.50 per 100. Postpaid. Supply limited.

WOLFE'S DEW-BLACKBERRY

Illustrated below Wolfe's Famous Dew-Blackberry

Actual photograph. Some of the berries 1 inch in diameter. The Dew-Black is far superior to any berry I grow. This berry is a cross of the dewberry and the blackberry as the name signifies. The tips will root the first year, after that it stands and handles like a blackberry. Here are some of its good points:

1. Small seeds.
2. Self fertile.
3. Large as Austin Dewberry.
4. No bitter taste like Dallas.
5. Commences to ripen May 20th and ripens for 5 weeks.
6. Produces a crop every year.
7. Drouth resistant.
8. Will produce 1,000 to 1,400 gallons of fruit per acre.

PRICES OF PLANTS

Dozen, 95c; 50, \$2.75; 100, \$4.90; 1,000, \$25.00; 5,000, \$100.00, postpaid.

Plant Paper Shell Pecans for Old Age Independence

What Are Your Plans for the Future?

What are you doing to provide for a future income? You are growing older, your health will not always be good, some younger person may get your job. When you are older, will you be mowing lawns, on relief and live with your children?

You can be independent, happy and contented by owning your own home and having an income from a pecan orchard that will grow more valuable as the years go by. Let me tell you HOW—with pecans.

Pecans Good Insurance

Plant a pecan orchard now and be prepared for the future. A tree that costs a dollar or more will quickly grow into a tree worth one hundred dollars. Our pecan trees begin to bear two and three years after they are planted so your dividends begin to come in. The older the trees the bigger the income.

Pecans Will Send Your Children to College

The owner of this business has built a modern home and sent his children to college with the money from his pecans. Why not plant 50 or 100 pecan trees for each one of your children now so that that child may be assured of funds for his or her education?

Are You a City Man?

If you are on a salary, would it not be a wise thing to lay aside a part of your earnings and buy a farm? Life in the fresh open air and a home among trees with a few chickens, cows and a garden and pecan trees to grow while you sleep will contribute to the happiness and uplift to yourself and your family.

Plant Thrifty Trees

If you plan to start a pecan orchard it pays to buy thrifty trees like the ones I grow. It is very difficult to grow a stunted tree into a fast growing tree in the orchard.

Trees I Grow

The trees in my nursery are grown from special seed which produce thrifty and fast growing trees. They are grown, dug and packed in the most approved manner.

Soil Inspection

If you are in doubt as to whether or not the land you have is good pecan or peach soil, I will be glad to inspect your land for you. By all means, do not plant a commercial orchard of pecans unless you know you have a good pecan soil. You can grow pecan trees in any yard where other trees will grow if you will give them water.

Six hundred turkeys and a nice herd of Jersey Cattle have been kept in our pecan orchard. The shade is good for the cows and turkeys which stock in turn helped keep down vegetation, control insects, and gave their droppings to enrich the soil. This orchard has made an average income of \$100.00 per acre each year for the last three years. This orchard is now fourteen years old and is growing on upland sand that formerly grew cotton, peanuts and corn.

WE PREPAY EXPRESS AND PARCEL POST CHARGES ON PECAN TREES

Pollination of Pecans

If you have a few native pecans among your budded pecans they will usually take care of your pollination problem. Where the orchard is all improved varieties some late pollen shedders and some early pollen shedders should be used.

Early pollen shedders: Western Schley, Texas Prolific, Success, Halbert, San Saba Improved, Squirrel's Delight, Moore and Onliwon.

Late pollen shedders: Burkett, Schley, Delmas, Stuart and Commonwealth. One tree will furnish enough pollen for 10 trees.

Distance for Planting Pecans

35 feet by 35 feet gives 35 trees per acre
35 feet by 70 feet gives 17 trees per acre
50 feet by 50 feet gives 16 trees per acre
60 feet by 60 feet gives 12 trees per acre
70 feet by 70 feet gives 9 trees per acre

Root Prune Pecan Trees

I have some large pecan trees that are 6 and 7 years old with straight stems and heavy branched tops that are ideal for yard planting. These trees had the tap root and part of the side roots cut in the spring of 1937, causing the tree to recover from the shock of cutting the tap root and making it put out a heavy set of lateral roots. Most of these trees are producing nuts in the nursery. Many of them ripening from 50 to 150 nuts.

VARIETIES: Burkett, W. Schley, Halbert, Jersey, John Garner, Delmas, Success, San Saba Imp.

We Grow the Genuine Risien Gold Medal Pecan Varieties

WESTERN VARIETIES

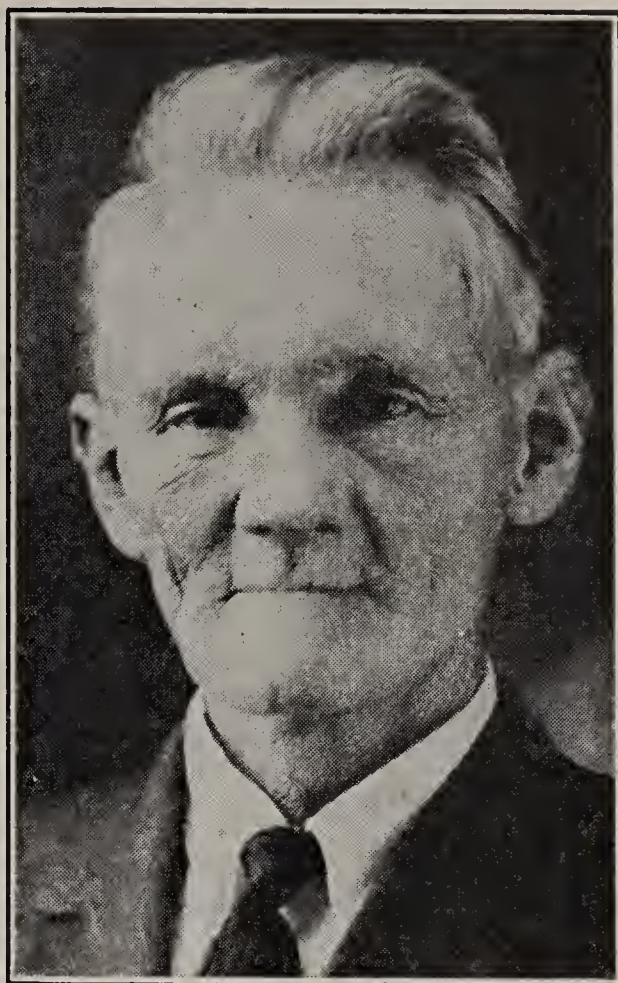

WESTERN SCHLEY. Each year I like the Western Schley pecan better. Ten years ago I selected it as the best pecan of the Risien Varieties. I have done everything I could to make it more popular. The tree is remarkably healthy, a strong grower an early and heavy bearer. The dark green foliage and symmetrical growth also make it very desirable for a yard tree. Burkett is a good pollinator for Western Schley and Western Schley and John Garner are good pollinators for Burkett.

ONLIWON. (Only One). This variety has paid Mr. Risien better than all others after 40 years' trial. Fine yellow meats come out whole. Ripe in midseason; 60 per cent meat, shell very thin.

SAN SABA IMPROVED. This nut looks good and tastes good. Smooth, firm kernels, light colored meat and shell and the meats release readily. Ripens early. I keep these nuts for my own use.

COMMONWEALTH. This is the latest variety to put on leaves and bloom of any variety in our orchard. This is a much better nut than Sq. Delight and should be tried out alongside of it. Long like Schley.

HALBERT. Young trees inclined to be crooked, but get straighter as the tree grows older. Very early and prolific bearer. Medium size nuts, very thin shell, excellent flavor. A good tree for black waxy land. Should not be set in Mississippi, Louisiana, East Texas or East Oklahoma. 57 per cent meat.

E. E. RISIEN
World's Foremost Pecan Breeder

SQ. DELIGHT. The chief merit of this variety is in its earliness of ripening, making it popular in sections having short growing seasons. Very popular in Oklahoma. The nut is long like Schley.

The Western Schley Pecan

The Burkett Pecan

BURKETT. The Burkett has been and still is the leading Western variety. The tree is a good grower, an early and regular bearer, the nuts are large and the quality so good that they are very much in demand at top market prices. Plant John Garner or Western Schley or both with the Burkett for perfect pollination.

MEYHAN. I am now able to sell genuine Meyhan Pecan Trees. These trees have been \$5.00 each. Prices now same as John Garner. See page 27.

Size of Pecan Tree to Plant

The trend each year is to plant larger pecan trees. The 4 to 5, 5 to 6, 6 to 7 and 7 to 8-foot are all good sizes for commercial planting. For yards or places where pecan trees can be cared for plant trees from 7 to 12-foot for quickest and best results.

EASTERN VARIETIES OF PECAN TREES

SUCCESS. This is the most popular Eastern variety in Texas. The nut is very large and oblong, with plump smooth creamy kernels that release perfectly from the shell. The tree is healthy and prolific and very resistant to scab. It ripens just after Stuart.

STUART. Stuart is a good bearer and the nuts are long and attractive. The shell is rather thick, but soft and the meats are sweet and brittle.

MOORE. It is very resistant to scab and is one of the earliest ripeners in the list. It is a good pollinator.

SCHLEY. This is the standard of excellence among pecans. The tree is healthy and is making good in the native pecan belt of Texas, Arkansas and Oklahoma in altitudes from 350 to 1,000 feet. Gaining in popularity and ripens early.

DELMAS. The two outstanding virtues of this variety are the beauty and prolificness of the tree and size and beauty of the nut. Its best range of adaptation is Central Texas. Ripens too late for most of Oklahoma.

Size of Hole for Pecan Trees

In ideal pecan soils, use a post-hole digger. The hole should be dug to a depth of about three feet. In hard soils, dig a hole three feet square and three feet deep so that the roots can get started before reaching the hard soil.

Be sure to order one or more of our Rose Collections. See back cover.

The Success Pecan

WE PREPAY EXPRESS AND PARCEL POST CHARGES ON PECAN TREES

The Famous *John Garner* Pecan has the

JOHN GARNER PECAN

These *Superior* Qualities

1. Easy to propagate.
2. Produces nutlets the first year from buds and grafts.
3. Healthy, strong and vigorous tree.
4. Bears nuts all through the top.
5. Bears every year.
6. Puts out late in spring and ripens early in fall.
7. The most beautiful nut grown. A real papershell, with kernels easily removed in halves.
8. Creamy pulp kernels, every nut is a good one.
9. Kernels rich in oil, protein, carbohydrates, vitamins and flavor.

BUDS AND GRAFTS

Buds, Grafts of nut and fruit trees, propagating tools and supplies together with other items of interest to my customers will be offered in my spring catalogue which will be ready for mailing out by February 1st. If interested just mail me a post card saying, "Please send me your spring catalogue."

Almonds

TEXAS. Now one of the most popular almonds commercially because of its extremely heavy, consistent crops of small soft-shelled plump nuts, excellent for shelled kernels. A late bloomer. Price: 75c each, prepaid. Medium size 50c each, postpaid.

GRANDE ENGLISH WALNUT

Grande **English Walnut (Our Introduction)**

GRANDE. This is a new English Walnut which originated on the Rio Grande River near El Paso from seed of the hardy French variety, the Franquette. It will bear the second year, is a heavy producer of high quality, thin shell English Walnuts. The tree grows rapidly and makes a beautiful tree for yards where it can be watered.

JAPAN HART WALNUTS. Trees extremely hardy and vigorous growers. Nuts sweet and of best quality, very productive. Good pollinator for English Walnut.

THE THOMAS BLACK WALNUT. The Thomas is a selected strain of Eastern Black Walnut with a comparatively thin shell which cracks easily, has light colored kernels in halves, with the same old delicious flavor which tastes so good in cakes and other confections. It makes a beautiful tree anywhere and bears heavy crops even while young.

WILSON WONDER ENGLISH. Called the "Jumbo Walnut" because of its enormous size, the individual nuts often measuring more than 2 inches in diameter. Offered in the stores at Christmas time for very fancy prices. Bears very young and heavily. A hardy tree.

White Roses

KAISERIN AUGUSTA VICTORIA. Queen of the white roses. Perfect shaped buds opening to perfect shaped blossoms.

CALENDONIA. A free continuous bloomer with large buds on long stiff stems. Very double.

Etoile de Hollande

Red Roses

AMI QUINARD. HT. Dark red, continues to improve each year. Blackish buds open, to semi-double flowers of velvety crimson-maroon with soft black luster. Petals get darker as the rose opens. Old rose fragrance. Vigor and growth resemble Radiance. Very popular.

FRANCIS SCOTT KEY. One of the largest deep red roses and the most double.

E. G. HILL. Beautiful large buds opening to immense flowers, unusually lasting. Dazzling scarlet shading to a deeper pure red center.

ETOILE DE HOLLAND. Dark red overlaid with almost black velvet shadings. Very beautiful and a free bloomer. Hardy.

AMERICAN BEAUTY. The old standby in red.

RED RADIANCE. The hardiest growing and freest blooming variety of all the roses, long pointed buds on long stiff stems. Excellent for cut flowers.

IMPORTANT

Have you read about the Allred Plum—the Plum with the Beautiful Red Foliage? Illustrated in Color on Page 20.

Red Radiance

WE PAY EXPRESS AND PARCEL POST CHARGES ON FRUIT TREES

Two-Tone and Yellow Roses

PRES. HOOVER. Buds large, long and pointed; flowers large, semi-double. Color, medium orange suffused with copper red and apricot. Hardy.

EDITH NELLIE PERKINS. Beautiful pink with coppery red and salmon, a strong hardy grower with stems and buds suitable for cut flowers.

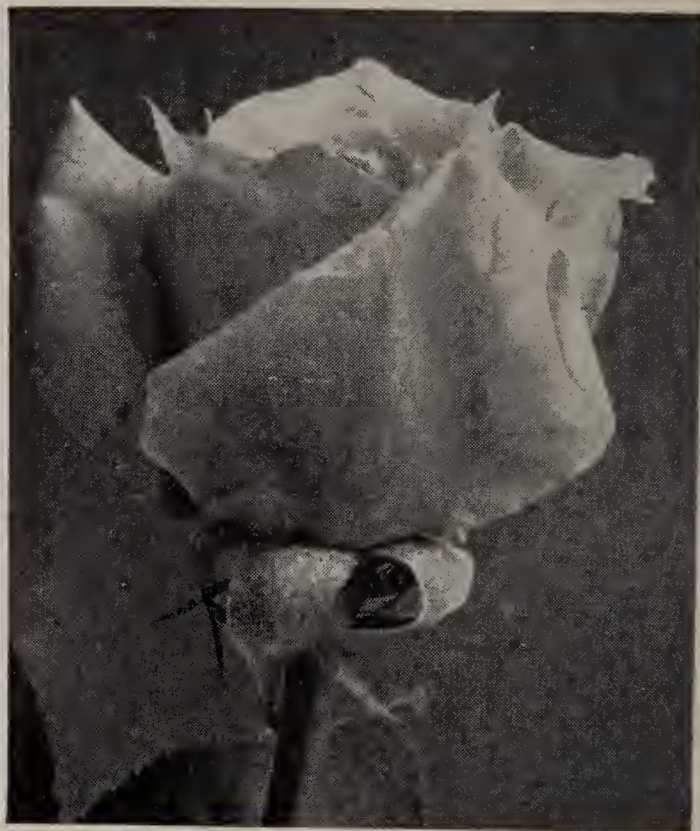

TALISMAN. HT. A rose of extraordinary effect. Very hardy. The urn shaped bud has a center of brownish red, exterior of gold. As the bud opens, the tints become lighter and the gold more brilliant. When in full bloom has a blend of both orange and gold. The 1933 American Rose Annual places Talisman in the No. 1 list of roses. With widespread praise and very little criticism.

LADY HILLINGDON. Apricot yellow, a free bloomer and a beautiful long pointed bud. Very hardy.

LUXEMBOURG. Long stems, flowers deep orange. One of the best two-tone roses.

SUNBURST. A golden yellow rose that is thoroughly described in its name.

We are making an exceptionally good offer on our Rose Collection this season. See back cover.

President Hoover

Pink Roses

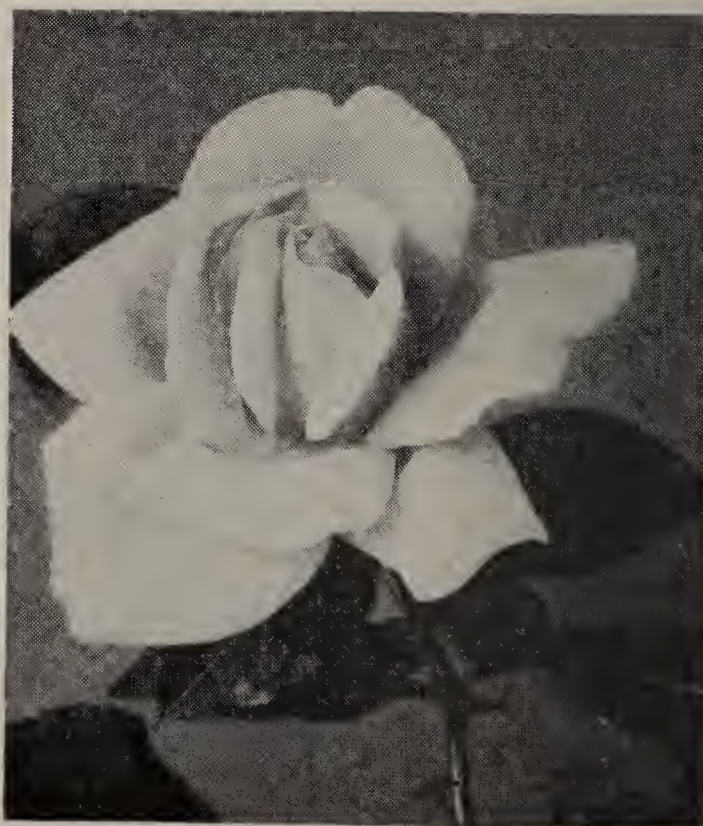

RADIANCE. Long pointed buds of beautiful clear pink on long graceful stems open into a tulip shaped blossom.

BRIARCLIFF. Sport of Columbia with buds somewhat longer than Columbia. Flowers 4½ inches across when well developed.

COLUMBIA. Unequal for beauty. This rose is in bloom when all other varieties are at a standstill. Buds long pointed on long graceful stems. Flowers opening to a beautiful silvery pink blossom that is very double and lasting. My favorite in pinks.

Talisman

Pink Radiance

WE PAY EXPRESS AND PARCEL POST CHARGES ON FRUIT TREES

Climbing Roses

All these climbers are of the very hardiest varieties and will soon cover a trellis or pergola and furnish a profusion of blossoms during the spring, summer and fall.

CL. PRES. HOOVER. Vigorous climbing sport of Pres. Hoover.

CL. RED RADIANCE. Identical with the bush Radiance.

CL. TALISMAN. Sport of Talisman.

CL. KAISERINE AUGUSTA VICTORIA. The best white climber.

PAULS SCARLET CL. Flowers scarlet shaded bright crimson, borne in large clusters.

MARECHAL NEIL. An old favorite climber, rich yellow.

CL. COLUMBIA. A true sport of Columbia. Hardy.

NOTICE

No shipments made to Mexico account
Customs Regulations.

Cl. K. A. Victoria

Polyantha Roses

Beautiful for grouping and borders. Growing in popularity. Profuse bloomers.

These little Sweet Heart Roses are becoming more and more popular for use in landscaping, rock gardens, hedges and for borders of various kinds. The most beautiful effect is obtained by using groups all of the same color. They bloom from early spring until late frost and are a source of pleasure during the entire blooming season.

GOLDEN SALMON. Large clusters of salmon orange and rose colored blossoms. Holds color well and a very profuse bloomer.

MISS EDITH CAVELL. Sport of Orleans Rose and the best dark red "Baby Rose." Large trusses of scarlet flowers.

ORLEANS ROSE. A very showy Baby Rose of dwarf compact growth. Huge bouquet of brilliant roses.

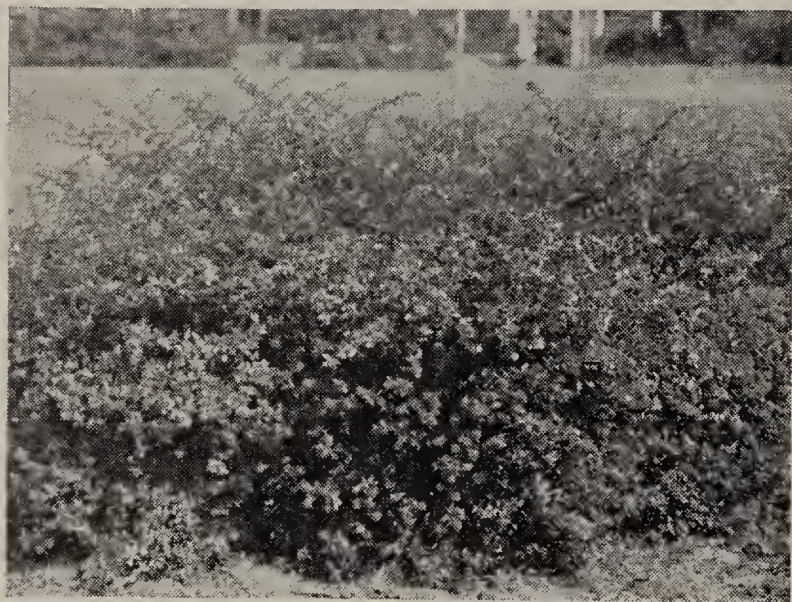

EBLOUISSANT. Medium sized bud, flower medium and very double. Dazzling red flowers borne in large clusters. Beautiful foliage.

Golden Salmon

WOLFE'S EVERGREENS AND FLOWERING SHRUBS

To meet an increasing demand for the first time we are offering a complete line of evergreens prepaid to our customers. These will come bare root with roots clay puddled in sizes that will transplant successfully without balling and burlapping. For larger plants balled and burlapped come to the nursery.

Abelia

EUONYMUS JAPONICA. A waxy, glossy, hardy evergreen that may be sheared or will cling to walls. 12-15 inch plants, 25c; 15-18 inch plants, 45c; 18-24 inch plants, 65c each, postpaid.

FIRETHORN (Pyracantha Formosa). A spreading evergreen with bright red berries, borne in large clusters which stay on the plant all winter. 12-18 inch plants, 35c; 18-24 inch plants, 45c; 24-30 inch plants, 65c each, postpaid.

NANDINA. This beautiful and popular evergreen has red winter berries, with red leaves through cold weather. 6-12 inch plants, 30c each; 12-15 inch plants, 45c each; 15-18 inch plants 60c each, postpaid.

MAHONIA (Oregon Grape Holly). This dwarf holly has autumn color foliage both winter and summer. 12-15 inch plants, 55c, postpaid.

Mahonia

Broad Leafed Evergreens

SENESA. Ashy colored foliage with orchid colored flowers that bloom at intervals throughout the summer. Will grow in droughty soil. One of the most popular evergreens in Texas. 12-15 inch plants, 50c each, postpaid.

ABELIA. A beautiful evergreen with glossy foilage that blooms from May until frost with a mass of white and pink fragrant flowers. Hardy. 12-15 inch plants, 30c each; 18-24 inch plants, 50c, postpaid.

Nandina

JASMINE FLORIDIUM. This is the best of the Jasmines, having rich green winter foliage with yellow flowers from spring until frost. 12-15 inch plants, 45c, postpaid.

RED LEAF BARBERRY. A very small growing evergreen with autumn red leaves through summer and winter. 12-15 inch plants, 45c each.

CHERRY LAUREL. A hardy upright evergreen that may be shipped and used as specimen or hedge. 12-15 inch plants, 35c each, postpaid.

WE PAY EXPRESS AND PARCEL POST CHARGES ON FRUIT TREES

Broad Leafed Evergreens

WAX LEAF LIGUSTRUM. Compact, wax leaves that stay rich green winter and summer. 9-12 inch plants, 35c, postpaid.

JAPANESE LIGUSTRUM. A large growing evergreen for Central and South Texas. 2-3 foot plants, 35c, postpaid.

BUSH HONEYSUCKLE (Heckrotti). The most beautiful shrub with red, pink and white flowers. Blooms from spring until frost. 12-15 inch plants, 50c; 15-24 inch plants, 75c, postpaid.

Arizona Cypress

Japanese Ligustrum

Coniferous Evergreens

ITALIAN CYPRESS. Tall and slender, rich green in coolr. 18-24 inch plants, 35c; 24-30 inch plants, 50c, postpaid.

ARIZONA CYPRESS. Steel gray in color and pyramidal in shape; fast growing and hardy. 12-15 inch plants, 35c each, postpaid.

PFITZER JUNIPER. The best of the spreading Junipers. 9-12 inch plants, 35c; 12-15 inch plants, 50c, postpaid.

Arborvitae

BAKER A. V. Tall, pyramidal evergreen, popular in Central and South Texas. 12-15 inch plants, 30c; 15-18 inch plants, 45c each, postpaid.

EXCELSA. Richer green than Baker and will not freeze in Texas. 12-15 inch plants, 45c each, postpaid.

Pfitzer Juniper

LET US LANDSCAPE YOUR HOME

I will furnish cost information and complete landscape plans to homeowners in my area. I will furnish you the plants with sketches and specifications, or I can do the planting for you. Balled Evergreens can be moved from September 15 to April 1 and longer.

WE PAY EXPRESS AND PARCEL POST CHARGES ON FRUIT TREES

Arborvitaes (Cont.)

BERCHMAN'S GOLDEN. A dwarf A. V. with rich golden fringe in winter. 9-12 inch plants, 35c; 12-15 inch plants, 50c, postpaid.

BONITA A. V. A dwarf globe rich green A. V., suitable for cemetery and yard. 9-12 inch plants, 35c; 12-15 inch plants, 50c each, postpaid.

Flowering Shrubs

DESMODIUM. A lovely lacy shrub blooming masses of pink flowers from August until frost. New and valuable. 2-3 foot, 50c, postpaid.

CRAPE MYRTLE. The popular summer blooming shrub. We have extra fine red, watermelon pink and white.

Pecan Buds and Grafts

(Except John Garner, Meyhan and Commonwealth)

See page 27.

PRICES:

Delivered by Parcel Post

25	50	100	500	1,000	5,000
\$.75	\$1.00	\$1.75	\$7.50	\$12.50	\$50.00

Note: 5c per bud will be charged when the order includes less than 25 of any one variety.

In orders including several varieties, a straight charge for each variety will be made. For example, if an order of 100 buds includes 25 buds of four different varieties, the price of 75c will be charged for each variety, making the amount \$3.00 for the 100 buds instead of \$1.75 as listed above.

Grafts of Shell Bark Hickory

We have a shell bark hickory that can be budded or grafted on pecan that makes a beautiful shade tree and thin shell hickory nuts. 6-inch grafts \$1.00 per dozen. (Limited supply.)

Black Walnuts—English Walnuts

Black Walnuts and English Walnuts can be top-worked on the native walnuts.

Varieties:

Thomas Black Walnut
Ohio Black Walnut
Wilson Wonder English Walnut

PRICES ON BLACK AND ENGLISH WALNUT BUDS AND GRAFTS

\$.75 for 12	\$2.00 for 50	\$3.00 for 100
	\$25.00 for 1,000	

Note: Not less than 12 Walnut buds sold. Please make bud orders total \$1.00. Walnuts bud more easily than they graft.

Grafts of Japan Hart Walnut

This is a hardy walnut which we got from Japan which produces regular crops of high-class walnuts, with clusters of 5 to 12 nuts to the bunch. This variety should be budded or grafted with the English Walnuts on the native walnuts to furnish pollen for them. Buds or grafts, \$1.00 per dozen. (Limited supply.)

Japanese Persimmons

EUREKA (Yemon)—Red Tomato shaped fruit. Almost seedless.

DATA MARU—Fruit is yellow, weighing nearly 1 lb. each. Early ripening.

PRICES ON PERSIMMON BUDS AND GRAFTS

\$.50 for 6	\$.75 for 12	\$2.00 for 50
\$3.00 for 100	\$25.00 per 1,000 postpaid.	

Note: The easiest and most successful way to work persimmons is by bark grafting or chip budding.

Texas Pecan Patch Budder

This popular and universally used knife opens and shuts, can be carried in your pocket and is in every way adapted to the needs of patch budding.

With this knife the patches can be cut and removed without the aid of any other knife. We guarantee these knives.

Prepaid—each \$1.50

OUR BUDS AND TREES ARE TRUE TO NAME

FOR SALE BUDS AND GRAFTS NOT LISTED

I will be glad to sell you buds and grafts of any fruit or nut variety, cuttings of grapes or root cuttings of berries that I offer for sale. Write me a list of what you want and I will make you prices.

BUDDING, PRUNING, AND GRAFTING KNIFE

Made of the finest steel. The oval blade may be used for T-budding. Small pocket size 3½ inches, stag handle, finely finished. \$1.35 each, postpaid.

KUNDE & SON PRUNING SHEARS

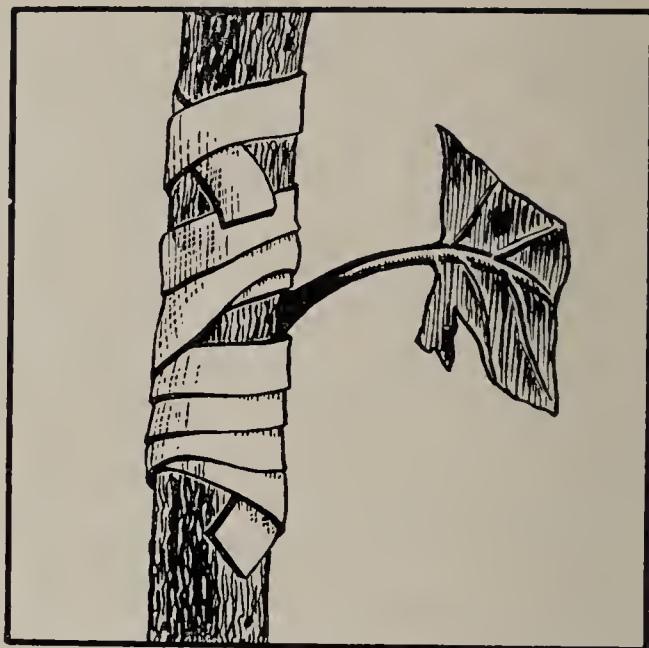

These shears are made of the finest steel and will stand heavy work in top working pecan trees and walnut trees. Length 8¾ inches—an exceptional value. Security plate and leather closure. Price \$2.60 each, postpaid.

DISSTON FOLDING SAW

This saw has a 10-inch blade, cutting on the draw stroke. A good saw for light pruning. \$1.45 each, postpaid.

DISSTON PRUNING SAW: Made like a hand saw. Stiff, narrow blade, 26 inches long; 5 teeth to the inch. Special beveled teeth cutting on both draw and push stroke. Reinforced handle. This is the best saw we have found for topping pecan and walnut trees. Price \$4.20 each. (Mailed direct from factory.) Postpaid.

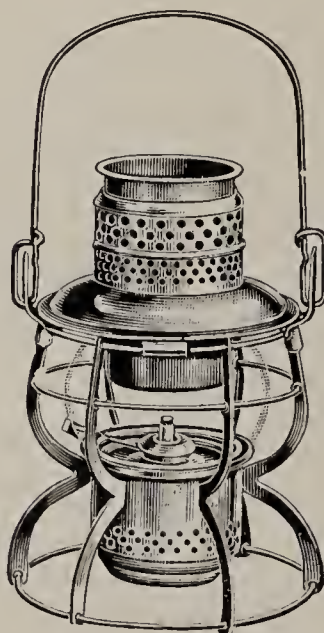

RUBBER BUDDING STRIPS

ADVANTAGES: (1) Exerts an even pressure without cutting the plant. The buds "take" more quickly with less loss. (2) Do not have to be cut. The strips deteriorate and usually fall off in three or four weeks. (3) Easier and faster to use than string or raffia—and save the labor of cutting.

Length	Width	Per 100	Per 1,000
4-inch	1/8-inch	\$.15	\$1.00
7-inch	3/8-inch	.40	2.50

NOTE: 4-inch is suitable for budding small stocks like roses, peaches, plums, etc., and the 7-inch is suitable for budding pecans, walnuts and persimmons up to 5/8-inch diameter. On pecans and walnuts we have been using a wax cloth patch under this rubber band.

Merribone Lantern WAX MELTER

Handles nicely beeswax, or paraffin. Recommended by the leading budders and grafters. It burns alcohol, flare cannot go out. Capacity ¾-pint. Complete with metal cup and brush.

\$6.75
(Postpaid)

GRAFTING WAX

For budding, grafting, topworking orchard trees, and as a sealer for wounds. One pound cake, 80c; half pound cake, 50c; ¼ pound cake, 30c. Postpaid.
